

ATTACK SURFACE SUMMARY

DATE:

PREPARED FOR:

OVERVIEW

The Cybersecurity and Infrastructure Security Agency's (CISA) Cyber Hygiene Posture and Exposure (P&E) analysis is a cost-free service that helps you monitor and evaluate your cyber posture found in public source information that is readily available to an attacker. This report outlines the total number of assets we have discovered and linked to your organization to help your security team better understand the scope of your attack surface. P&E does not guarantee a complete picture of your attack surface and cannot guarantee that there are not other assets which may be identified by a threat actor.

ATTACK SURFACE FINDINGS

IP ADDRESSES

CIDR BLOCKS

PORTS/PROTOCOLS*

ROOT DOMAINS

SUB-DOMAINS

SOFTWARE

SERVICES HOSTED OUTSIDE US

*Unique pairs of ports and protocols

DATASET

The linked dataset contains the data we discovered and linked to your organization.

Root domains and CIDR blocks are used to identify the rest of your attack surface. If any of the reported root domains or CIDR blocks do not belong to your organization, please contact vulnerability@cisa.dhs.gov. Additionally, if the report is missing any of your known assets, please reach out to report them to Posture and Exposure and they will be added for future scanning.
